

## Cross Functional Team

A team which has end-to-end capacity and capability to deliver business value – requirement elicitation till production deployment (delivery to end user) is a **Cross Functional Team**.

A cross functional team should be **interdisciplinary team** – A team which analyzes, synthesizes and harmonizes links between disciplines into a coordinated and coherent whole to realize the outcome. It should not be **multidisciplinary** (draws on knowledge from different disciplines but stays within their boundaries) but with the **T-shaped skill set** members. Simply speaking team members must be able to wear multiple hats as and when required.
